FridgeMate

Stanislav Nikolov

https://git.fhict.nl/I507486/use-your-fridge-app.git

The idea of this project is to make it easier for people to decide what to eat for dinner, lunch or breakfast. Just by entering all

the products and ingredients they have, the program will come up with a list of tasty dishes the users could make.

Update your fridge everyday by adding new products so that it could be always up to date.

You will have a big variety of products which you could add to your digital fridge so that it is the same as the real one.

Also when a product is not present in the fridge the user will be able to buy it directly.

Site Map

Profile Page – information about you

Your Fridge Page – every product you have, of course in different tabs within this page – separated by type of food, ingredients, liquids and exc.

Add Products To Fridge Page – A wide variety of products from which you can choose to add to your fridge.

Add Products Administration – Be able to create, update and delete products from the database.

Order Products Page – Be able to order to your home the products you need for today's meal. By adding the products to your shopping list, if they are purchased, they automatically will be added to your fridge.

Recipe Page – The page which will be shown when the recipe is created.

Add Recipe Page(Only for admins) – In this page the user will be able to add their own recipes in the database.
Site Map
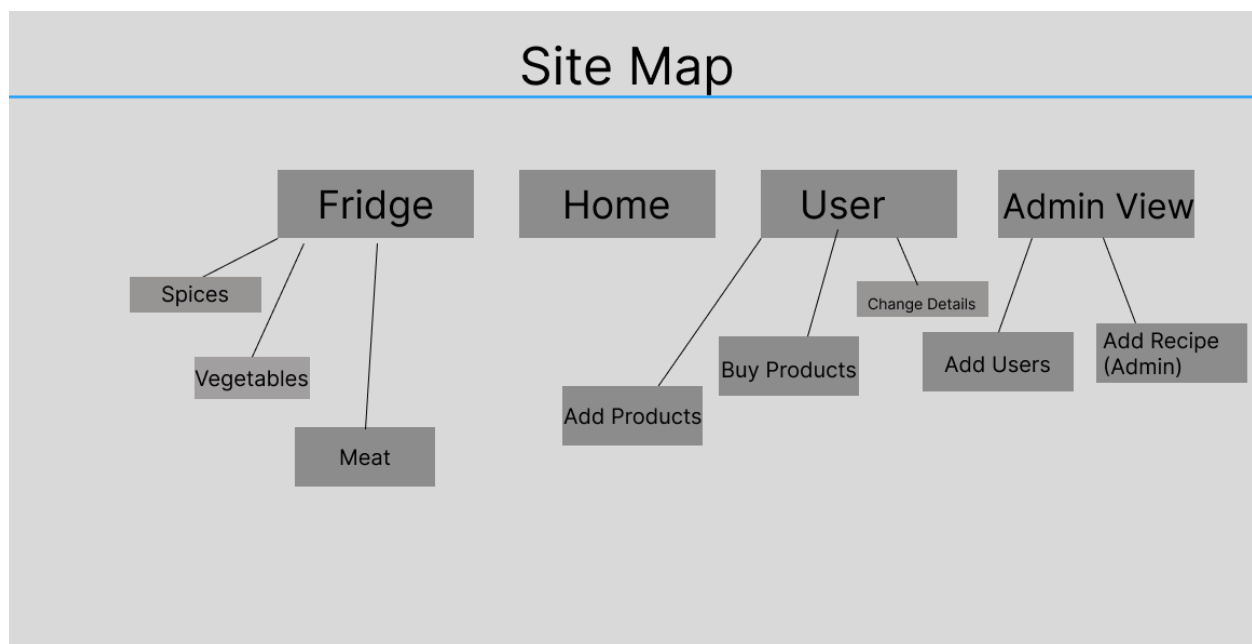

RECIPE

- 3 cloves garlic, peeled and sliced
- ⅛ teaspoon ground black pepper
- salt to taste
- 2 ½ cups lemon juice
- 1 cup canola oil
- 1 large head romaine lettuce - rinsed
- 1 pint cherry tomatoes, halved
- 1 red onion, sliced
- 4 ounces feta cheese, crumbled

---

1. In a mortar and pestle, crush the garlic.
2. Add the pepper and salt and continue
3. mashing until mixture becomes a thick paste.
